	<p>The invention set forth in claims 1 to 14 does not involve an inventive step in the light of documents 1 and 2 cited in the international search report.</p> <p>Documents 1 and 2 set forth a modified antibody having an L chain V domain and an H chain V domain which forms the same antigen bonding domain as a new antibody which effectively does not have a TPO agonist activity and which bonds to a TPO receptor, as a modified antibody having TPO agonist activity, and suggest that said modified antibody includes antibodies having an agonist effect (see document 1, page 5, lines 17 to 25; document 2, page 5, lines 6 to 15).</p> <p>Moreover, a modified antibody containing two or more L chain V domains and two or more H chain V domains of a new antibody such as sc(Fv)₂ was a known feature at the priority date of this application (see, for example, J. Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

In the light of said suggestion of documents 1 and 2, it would be easy for a person skilled in the art to conceive of measuring the bonding activity of sample antibodies, selecting a new antibody having bonding activity, using known genetic engineering techniques to prepare modified antibodies having the pair of H chain V domain and L chain V domain of said new antibodies, measuring the agonist activity of said modified antibodies, and selecting a modified antibody having agonist activity.
